CIVIL ENGINEER – DIRECT AIR CAPTURE (DAC) ENGINEERING

We are looking for a skilled and motivated Civil Engineer to join our team in the exciting field of Direct Air Capture (DAC) Engineering. As a Civil Engineer, you will be instrumental in designing, developing, and implementing DAC infrastructure to combat climate change and reduce carbon emissions.

RESPONSIBILITIES:

- Lead and oversee civil engineering aspects of DAC projects, including site selection, design, and construction of DAC facilities.
- Collaborate with multidisciplinary teams to ensure the integration of civil engineering components with other engineering disciplines.
- Develop detailed engineering plans, specifications, and cost estimates for DAC projects.
- Conduct site assessments, feasibility studies, and environmental impact assessments.
- Ensure compliance with regulatory requirements and industry standards for civil engineering in DAC projects.

LET'S TACKLE
CLIMATE CHANGE WITH
TECHNOLOGIES
THAT PUT OUR NATURE AND
OUR FUTURE FIRST.

REQUIREMENTS:

- Bachelor's or Master's degree in Civil Engineering or related field.
- Proven experience in civil engineering, preferably in the field of Direct Air Capture (DAC) or related environmental technologies.
- Strong knowledge of civil engineering principles, including structural design, geotechnical engineering, and site development.
- Proficiency in computer-aided design (CAD) software and other relevant civil engineering tools.
- Excellent project management skills, including budgeting, scheduling, and risk assessment.
- Ability to work independently and as part of a team, with excellent communication and collaboration skills.

We offer competitive compensation, benefits, and the opportunity to work on cutting-edge technologies with a mission-driven team dedicated to addressing climate change. Join us and contribute your civil engineering expertise to shape a more sustainable future!
